

COMPETITIVE ANALYSIS OF LEADING TRAVEL AGGREGATORS

PERFORMANCE & FINAL SUBMISSION PHASE

Model Performance Metrics

- 1. Metrics are used to monitor and measure the performance of a model (during training and testing), and don't need to be differentiable.
- 2. However, if, for some tasks, the performance metric is differentiable, it can also be used as a loss function (perhaps with some regularizations added to it), such as MSE.

Project Documentation

- 1. Project documentation consists of a collection of documents that the project manager creates during the project's development process.
- 2. The project team is expected to follow certain procedures, specifications, and guidelines for such documents, including a project plan, schedule, and budget.

How to Manage the Project Documentation Process

Create the documents in advance

1

Make documentation maintenance an ongoing process

2

Share, review and approve the documents

3

Save and archive the documents

4

Project Demonstration

- 1.A Demonstration Project is a relatively self-contained small-scale capital investment or technical assistance project, the purpose of which is to “demonstrate” a particular approach.
- 2.A demonstration project is a means of promoting innovations and capturing and disseminating best practice through the development and analysis of a live project.
